

HAIR FOLLICLE DRUG TESTING

Hair Testing provides quantifiable results across a **90-day standard testing timeframe**. Sample collection requires **no special facilities and is non-invasive**, with hair samples being cut close to the scalp. Hair samples cannot be substituted or diluted and are difficult to adulterate. This test is **preferable for random screening**, as it detects those who choose a **lifestyle of drug use**. Hair Testing is generally used for **Insurance Purposes, Legal Disputes, Pre-Employment screening and Rehabilitation Programs**.
